FIPS 201 Enrollment Reader
USB connected Reader. This reader is preprogrammed by DSX to properly read the FIPS201 card and insert the proper data into the WinDSX SQL database.

Requirements
FIPS 201 Enrollment Reader that is formatted by DSX for WinDSX SQL.

Requires WinDSX SQL version 4.8.75 or higher.

Device Type T5 – No Issue Level
Device Type V6 – Issue Level (recommended)

Connections
Connect Enrollment Reader to a USB Port on a Client PC running WinDSX SQL.

Enrollment Process
Add or Edit a card holder. Advance to the Card screen and click on the Notes field.

Once the cursor is in the Notes field – Present the Card to the Reader by laying the card on top of the reader in the same orientation and letting go.

Once the Card is presented the data is briefly shown in the Notes field before it is copied into the Code and Stop Date fields appropriately.

Click OK to Save.

(Other Enrollment Readers are available from DSX to properly read different types and formats of Cards.)
